PUBLIC SEATING SYSTEMS

Telescopic Seating

Hussey Seatway is your premier partner in custom seating solutions

At Hussey Seatway, we specialize in the design, manufacture, and installation of retractable and fixed seating solutions for education, sports, theatre, and entertainment venues. Our reputation has been built on high-quality products and exceptional customer service.

From our base in the UK, we service markets globally with high-quality, effective, and innovative seating systems. Our focus is on ensuring satisfaction whilst supplying the end user with a product that is specifically designed and tailored to their requirements.

Our chairs and benches can be custom-designed to suit your requirements with a wide range of fabric and polymer colours. Therefore, depending on your requirements, we can provide you with the seating to best suit your venue. We work closely with you to design your seating depending on your available space and your budget.

Standards

We are CHAS, Constructionline, SMAS, and Safe Contractor accredited providing buyers and customers with confidence. Our products and services conform to relevant British, European, and North American standards for strength, stability, layout, and fire retardancy.

In this respect, we are proud to provide management resources to the Institute of Structural Engineers, and the BSi and CEN committees presently working on public seating products.

Our products are certified with a CE mark. This is our declaration that our products comply with essential requirements of the relevant European health, safety, and environmental protection legislation.

Strength & Stability

All our benches and chairs satisfies the requirements of ICC 3000

Fire Retardancy

Compliant with CAL 119 as standard, and CAL133 as required.

Telescopic Seating

Hussey Seatway is your go-to UK specialist for designing and manufacturing retractable seating tailored for education, sports, and theatre/performing arts.

Our innovative seating units, also known as telescopic, raked, retractable, or bleacher seating, create tiered seating areas that enhance sightlines, improve audience comfort, and maximize capacity for any event. Our telescopic seating can be easily closed away, either manually or electronically, providing you with a multipurpose space that adapts to your needs.

We pride ourselves on delivering expert service to ensure the perfect seating solution for each customer. Trusted by venues worldwide, we guarantee quality and reliability.

Our Hussey Seatway TP retractable platforms is tailored to your specific needs, offering flexibility, durability, comfort, and safety.

Our raked, tiered seating systems come with a 10-year warranty as standard, which, backed up with our comprehensive maintenance packages, will allow our seating to become a fixture in your facility for years to come.

Our Process

Consultancy

We provide a no obligation consultancy service, which includes site visit(s), should this be required, initial discussions, a comprehensive proposal, detailed quotations, specifications and drawings.

Manufacture

We have our own assembly operations and a global group of manufacturing partners that gives us choices and high standards on five key measurements:
Quality, Technology, Design, Financial Competitiveness.

Installation

Installations are carried out by fully trained staff who hold all necessary supervisory and H&S qualifications. Comprehensive training is provided to the end user, and a hard copy and electronic O&M manual are provided.

Custom Design

We have a creative design and engineering team that produces schematics and detailed drawings to help visualise concepts.

Project Management

We provide clear and visible progress reports for our clients. Your initial sales contact remains your project manager throughout the life of the project.

Aftersales

Following the installation process, our service and maintenance team will provide support, servicing agreements and spare parts as required throughout the lifetime of the seating system.

Seatway TP

A market leading telescopic platform system.

The Seatway TP has been developed in the UK, and it's the only platform in the UK to feature a fully welded platform structure rather than a set of bolted-together components for a robust, sturdy construction.

Specifically for use in facilities such as performing arts centers, theatres, and school auditoriums where a more solid feel to the structure is required and where full theatre folding chairs need to be installed.

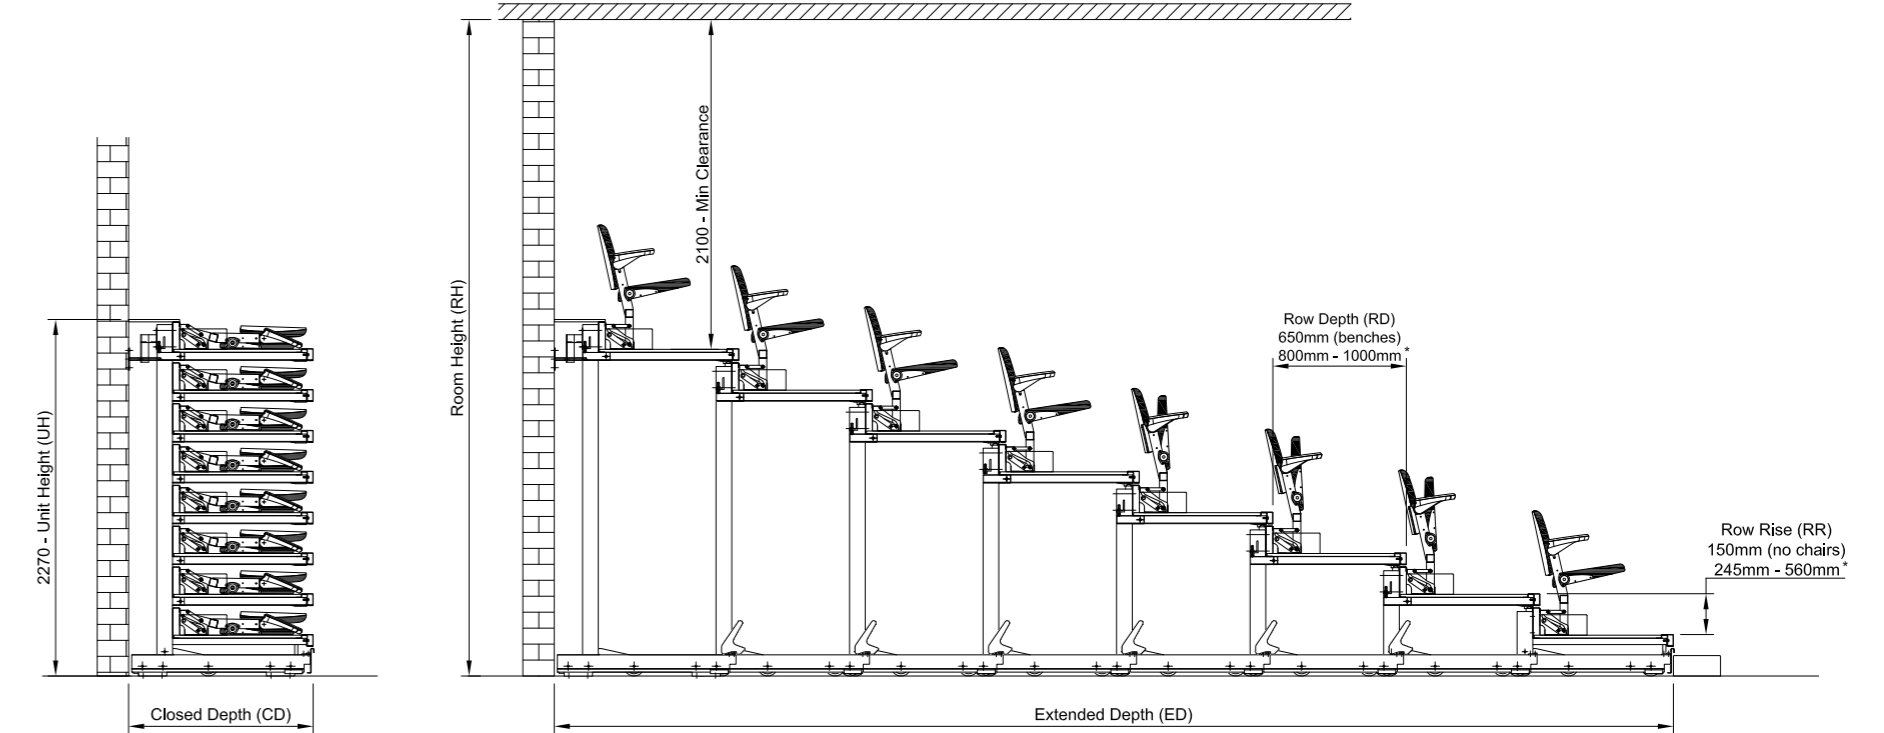

As part of our initial consultation, we take measurements of the space and provide you with either a seat count or a detailed CAD drawing based on the measurements taken from our site visit.

The Seatway TP is a premium, high-performance, telescopic seating system that is custom-engineered to suit specific spaces and design concepts, leading to flexible seating configurations. Therefore, unit width, depth, and rise are bespoke and can be designed to maximise audience sightlines and seating capacity.

The Seatway TP is an exceptional platform solution that has been used in high-profile venues including Alexandra Palace, Royal Opera House, and the Guild Hall School of Music.

Seatway TP

Dimension Guide	
RH	(number of rows x row rise) + [7"]
UH	(number of rows x row rise) + [2 1/2"]
ED	(number of rows x row depth) + [1'-1"]
CD	Row depth + [1'-1"]
RD	* Custom row depths are available
RR	* Custom row rises are available

<p>Disability Provision Hussey Seatway provide seating solutions that address the provisions of the Disability Discrimination Act (DDA 2005).</p>

Openings

Fixed
Our most popular telescopic seating solution. Wall or ceiling attached systems are extremely adaptable, and you can competently transform your space when closing the system, allowing you to get the most out of your facility.

Mobile
Our mobile system is a manual operation allowing you to easily move and store the system where you want them around a room to create any number of custom seating layouts for different events.

Reverse Fold
Reverse-fold systems retract from back to front to create additional space behind the unit. This space can be used for practice areas, batting cages, volleyball, gymnastics or any wide array of uses.

Recessed
Our recessed system utilises a pocket in the wall to house the system when closed. The bleacher is hidden from view typically under a balcony or mezzanine.

Freestanding
Freestanding units have a heavier rear column that's permanently secured to the floor, these bleachers provide design flexibility for buildings that can't support wall loading or where wall loading is marginal.

Travelling
Traveling units use integral power to drive the entire bank from one setup position to another. (Forwards or backwards). Set-up time is greatly reduced compared to individual portable sections.

Operational Options

Manual
Our systems are manual by standard. The T-bars are fitted into the front of the unit and can help open or close the unit with a simple push or pull.

Pendant Controllers
Pendant controls allow the operator to open and close the seating system. The pendant control can be easily removed to prevent unauthorised use.

Wireless Pendant Controllers
We can upgrade your wired pendant controller to a wireless version, providing you with more flexibility when opening or closing your retractable seating system.

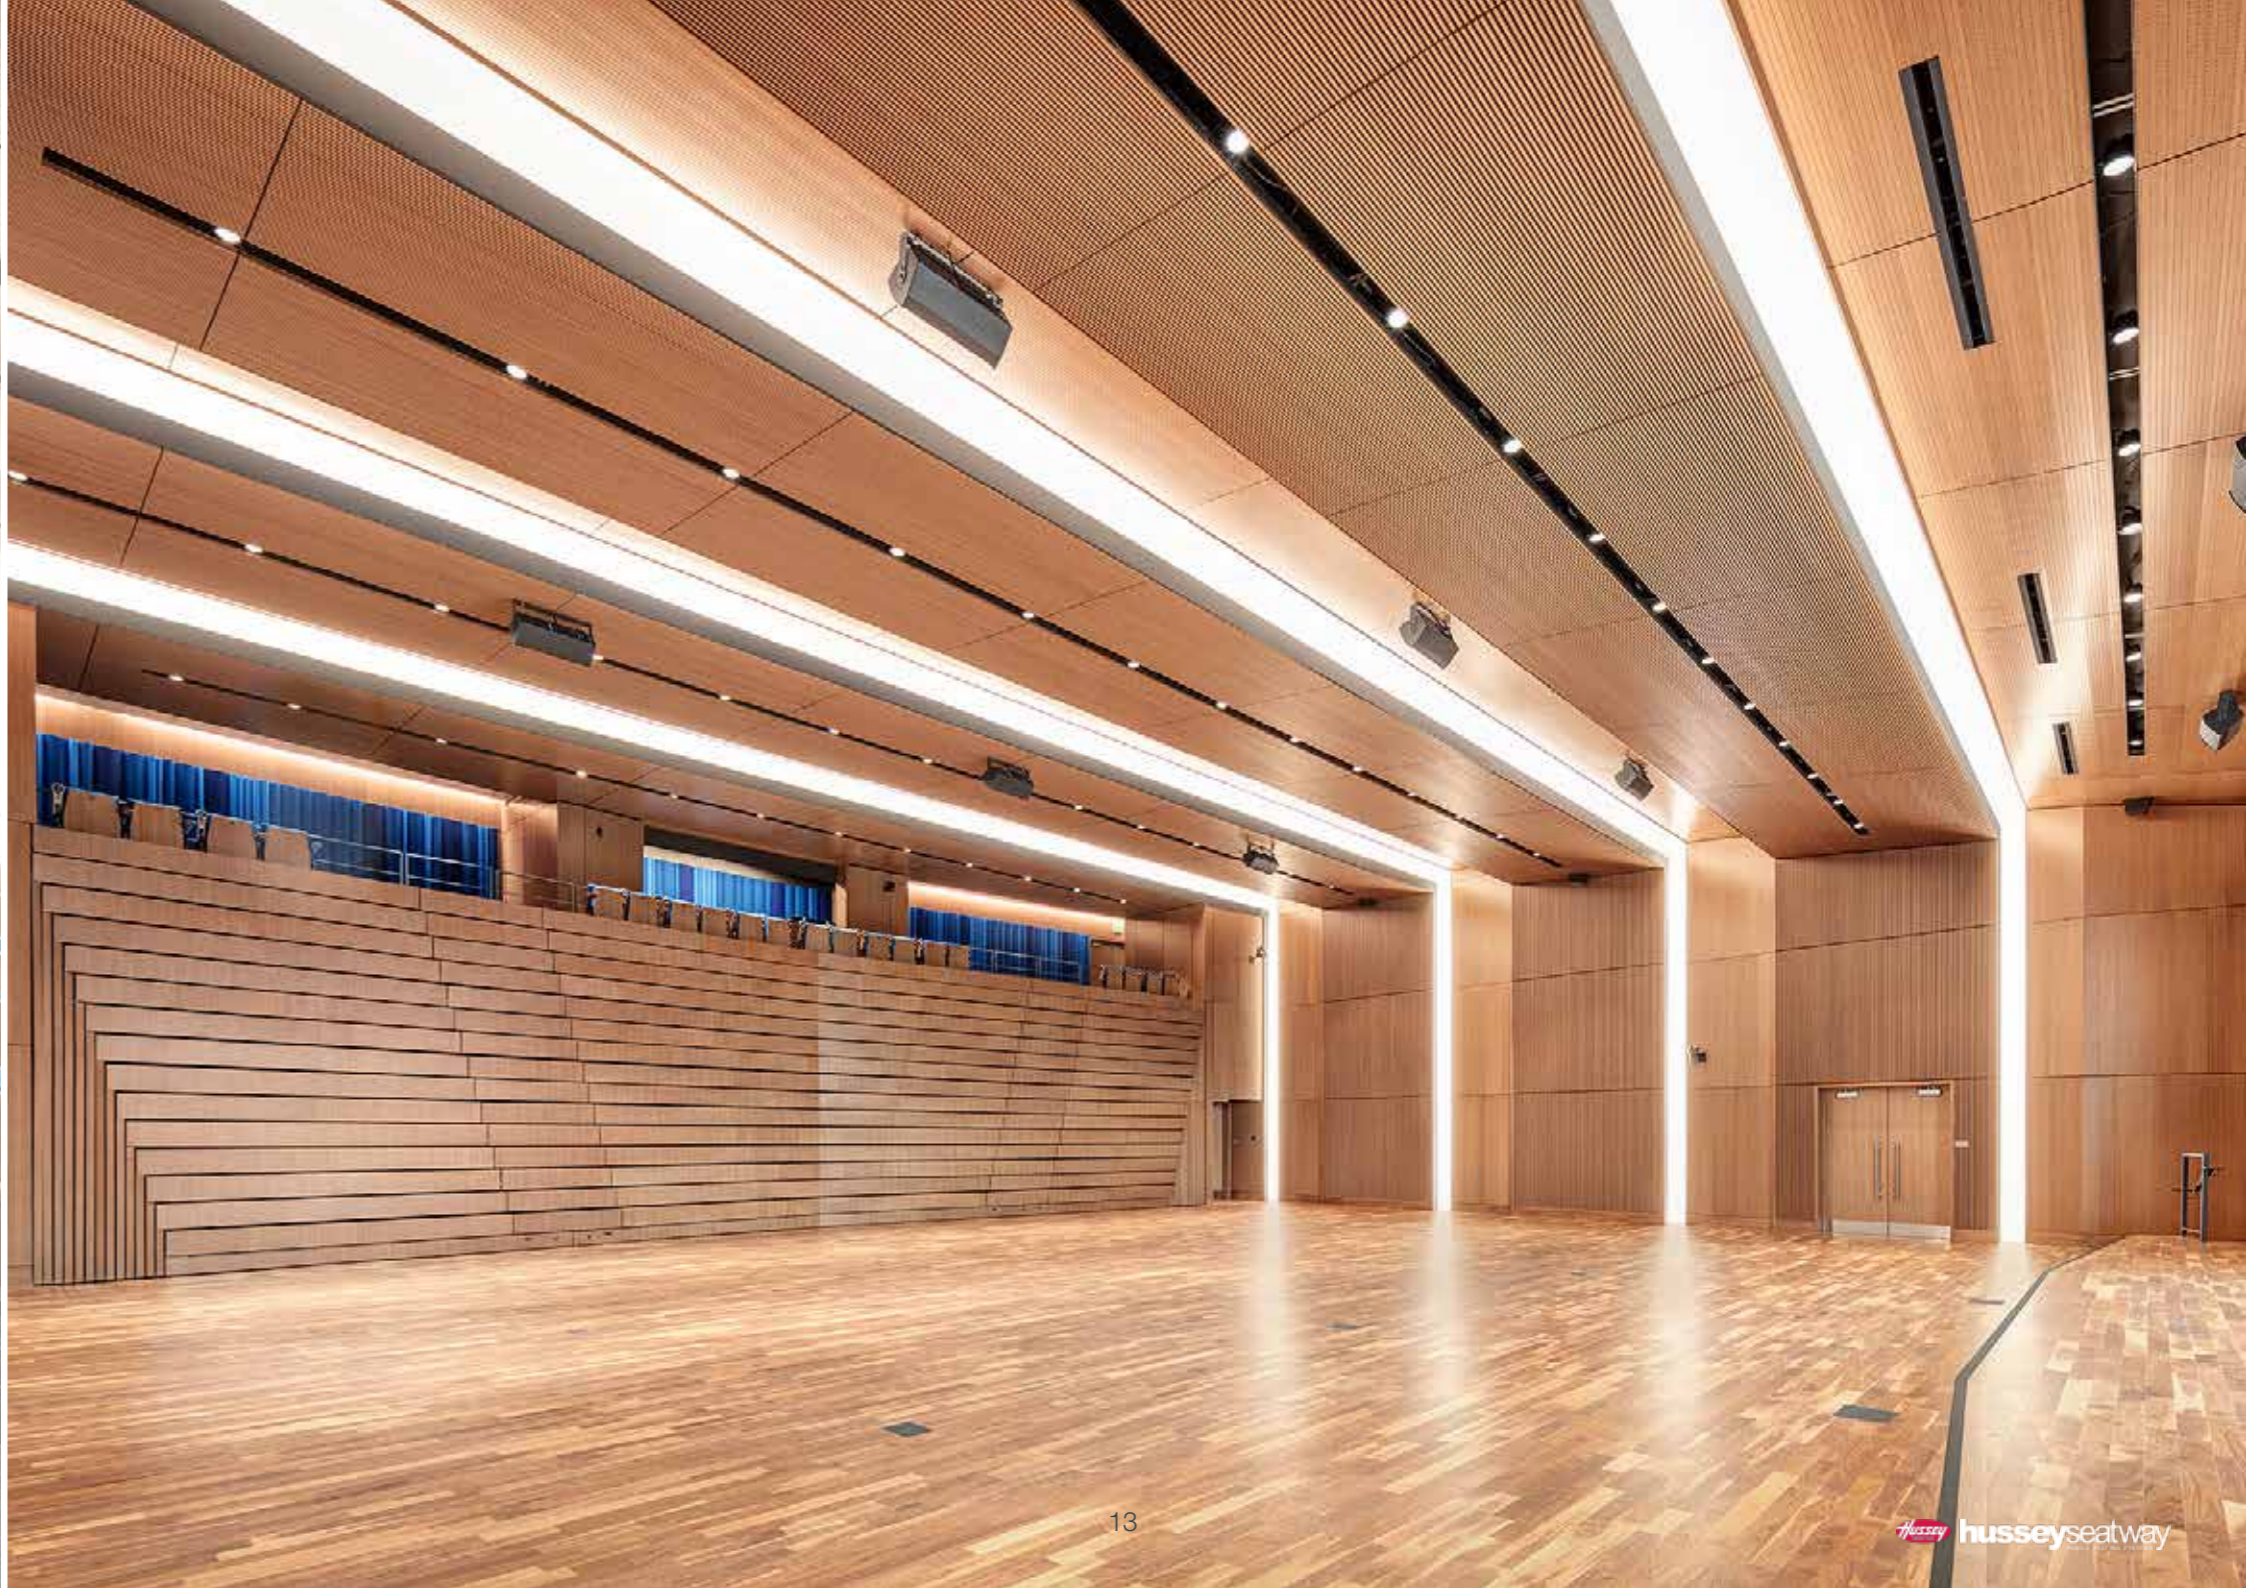

Power assist tug
Tugs open and close manual sections by moving the tractor from section to section.

Hydraulic Trucks – mobile units
Hydraulic trucks are available for mobile units. They are manually operated and help move mobile units around the room.

Integral Hydraulics
Integral Hydraulics can be fitted under row 1 inside the unit. This is beneficial for users who don't have space to store hydraulic trucks.

Seating Configurations

Double Depth Rows
 Double Row Depths enable 2 rows of chairs to be fitted per platform. This is ideal for venues with restricted ceiling height. We install a special feature to enable the platforms to be set at single or double depth.

Electronic Partial Opening
 Allows the user, at the flick of a switch, to select the desired number of rows to open, offering the ability to alter capacity depending on the requirement of the event. This feature is available with our Seatway TP system only.

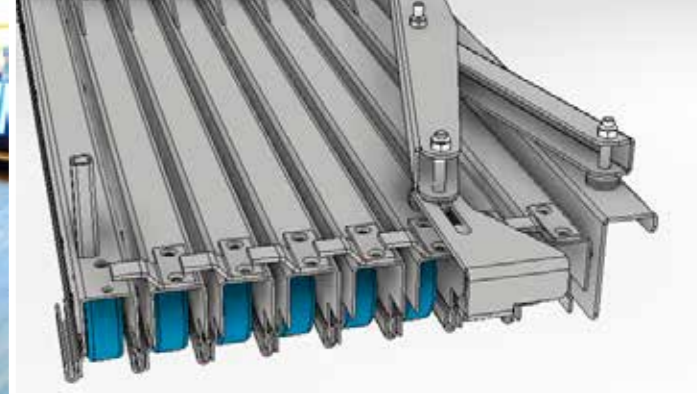

Flex Row
 Designed with inclusivity in mind, featuring cutouts for wheelchair seating in the first row. When wheelchair access is not required, these flex rows can be pulled out and used as additional seating.

Row 0
 Row 0 seats offer a cost-effective way to increase your venue's seating capacity. These seats are permanently fixed to the front beam of Row 1, providing additional seating.

Semi-automatic operation
 A mechanism that enables the chairs on a retractable seating system to fold onto the platform automatically. This is a feature used in venues where striking times of a seating system are critical.

Mechanical Partial Opening
 A simple solution to enable the end user to open retractable platforms and row configuration while ensuring all safety mechanisms are suitably deployed. The system can be provided as part of a new installation or installed retrospectively.

Low Rise Platforms
 Low-rise platforms are available from 150mm for use with portable chairs. Used to compliment Hussey Seatway retractable seating installations or as a stand-alone item.

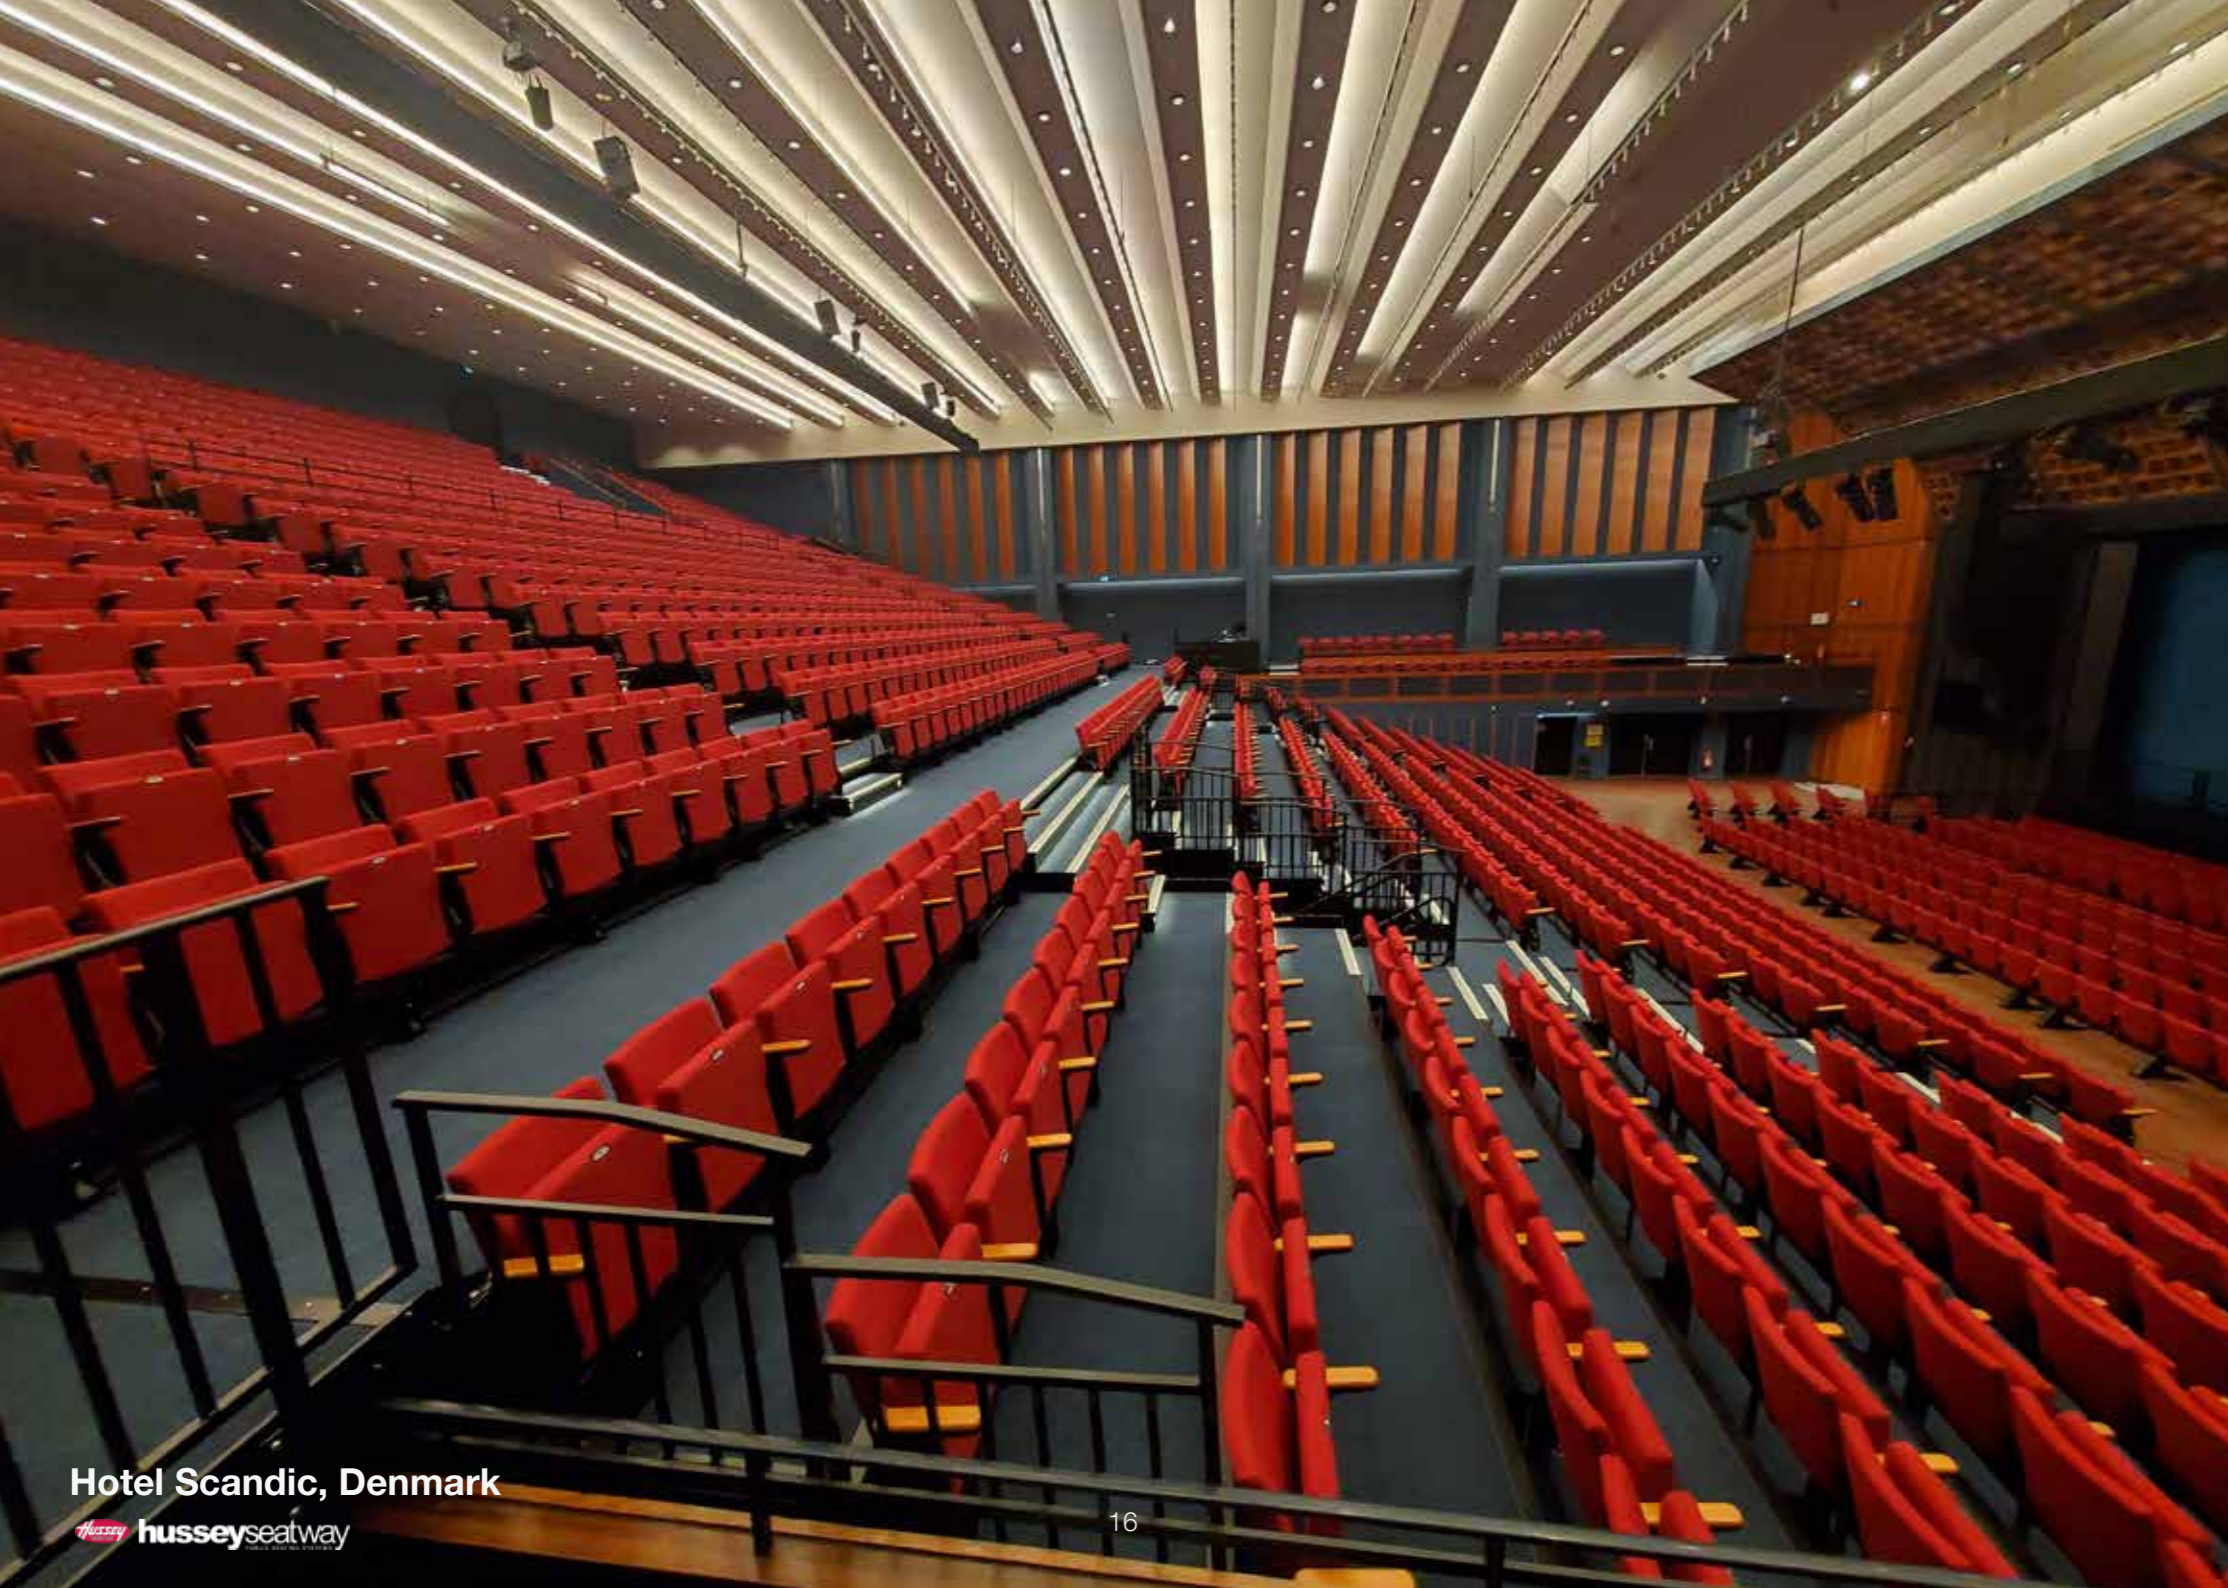

Vomitories
 This is a custom feature that we can offer to enable access through the seating unit at the floor level.

Truncated Rows
 Truncated rows allow the retractable seating units to be partially opened with the front rows closed.

Wing/Tapered Units
 Wing Units are bespoke, designed to best fit the shape of the building and, therefore, maximise seat capacity.

Hotel Scandic, Denmark

Sides

Front and Rear Rails
Fixed front and rear rails are a safety feature and ideal solution for truncations, elevated front aisles, freestanding, portables and reverse fold systems. All rails maintain a consistent design appearance.

Removeable Rails
Removable side rails come as standard on our seating system. The rails are removed when the seating system is retracted and stored elsewhere.

Self-Storing Rails
Self-storing rails are kept on the unit and nestled together when the unit is closed. Add 12" (305 mm) to the bank length for each railed end.

Side Panels
Available in a variety of finishes, including acrylic, metals, and wood. The sides can be tailored to match the aesthetic of your venue.

Side Drapes
Designed to enhance the look of your venue and provide practical solutions for safety to prevent access under the structure. Upgrade our standard drapes to branded side drapes to incorporate your colours and logo.

Side Rails
Typically required on units that are not wall-to-wall and act as a safeguard for users. Available in a variety of finishes, including acrylic, metals, and wood, the sides can be tailored to match the aesthetic of your venue.

Folding Side Rails
Our side rails can be stored neatly in the unit before closing. Thanks to their folding and self-storing mechanism, you can fold down the sides into the aisle for a clean finish.

Deck infills
Removeable infill to create a seamless panel for two adjoining units. Provides safety to the users to prevent trip hazards.

Trolleys
If you have removeable end rails, we can provide trolleys to store your end rails on and keep them in a separate storage area.

Drop in Plinths
For added convenience, we can offer drop-in plinths as part of your seating solution. These plinths provide extra surface space, making them ideal for various uses such as tables or control booths.

P Rails
The design ensures your users will always find a secure handhold while moving up or down the aisles. Hand safety rails include fixed, folding and removable options and feature a safe, fully closed design.

Finishes

Aisle Lights
Ideal for theatres, our LED aisle lights can emit light forward or directly onto the platform below. They come with dimming switches to ensure that performers are not distracted, offering a perfect balance between visibility and ambience.

Aisle Numbers
To help guests locate their seats, we provide a variety of standard row letterings. These clear and visible markings ensure efficient navigation and enhance the overall guest experience.

Carpeted Deck
A carpeted deck comes standard on Seatway TP retractable platforms, adding sophistication to any seating solution. Phenolic, wood or vinyl finishes are available on request.

Custom Cladding
Provided between top row and wall, a supported, flush mounted filler. The filler shall be the same material and deck finish as the decking.

EcoGlo
EcoGlo photoluminescent strips are self-charging and easily installed into our aisle trims. They are a cost-effective and durable solution, providing clear visibility in low-light conditions.

Fascia Boards & Aisle Infill Panels
Fascia boards and aisle infill panels are available in a variety of standard and bespoke finishes, designed to seamlessly complement your seating system and enhance the overall aesthetic of your venue.
